Standards of service to the public

Statistics Canada is committed to serving its clients in a prompt, reliable, courteous, and fair manner. To this end, the Agency has developed standards of service that its employees observe in serving its clients. To obtain a copy of these service standards, please contact Statistics Canada toll free at 1-800-263-1136. The service standards are also published on www.statcan.ca under About us > Providing services to Canadians.

Note of appreciation

Canada owes the success of its statistical system to a long-standing partnership between Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.

Symbols

The following standard symbols are used in Statistics Canada publications:

- . not available for any reference period
- .. not available for a specific reference period
- ... not applicable
- 0 true zero or a value rounded to zero
- 0^s value rounded to 0 (zero) where there is a meaningful distinction between true zero and the value that was rounded
- ^p preliminary
- ^r revised
- x suppressed to meet the confidentiality requirements of the *Statistics Act*
- E use with caution
- F too unreliable to be published

Other symbols used in this publication

- Affected by change of name, type or code, including amalgamations and dissolutions since January 2, 2001. See Appendices 1, 2 and 3 of this volume.
- ◆ Affected by boundary change or revision of population counts since January 2, 2001. See Appendix 4 of this volume and “Interim List of Changes to Municipal Boundaries, Status and Names” (Catalogue no. 92F0009XIB).
- CMAs and CAs subdivided into census tracts.
- * Denotes “part of”.
- ** new entity from 2001, updated in its creation year.
- *** new entity from 2001, updated after its creation year.

Preface

The Standard Geographical Classification (SGC) is Statistics Canada's official classification for geographical areas in Canada.

Established in the early 1960s, the Standard Geographical Classification was released as a working manual for 1964, 1966 and 1972. In 1974, the manual became an official publication of Statistics Canada and it was subsequently issued for 1976, 1981, 1986, 1991, 1996 and 2001. This 2006 version is the eighth edition.

The classification consists of two volumes, each available separately. Volume I describes the classification and related standard areas and provides an alphabetical index of place names. It also explains the changes between the 2006 edition of the SGC and the 2001 edition that impact directly upon the SGC, such as changes in name, type, or code, and indicates how the new and old codes relate to one another. Volume II contains reference maps showing the locations and boundaries of the standard geographical areas in the classification. The maps are available for a fee in a paper version or can be downloaded for free in PDF format from our website.

The 2006 Standard Geographical Classification is published by Standards Division, under the guidance of Alice Born, Director. The publication was prepared by Richard Fortin and Guy Auger under the supervision of John Crysdale. Major contributors included Geography Division, which was responsible for the source data for the tables and definitions as well as for the preparation of the maps; and Dissemination Division, which was responsible for setting PDF table and text formats as well as printing.

4. Annual revisions to 2001 census population counts of census subdivisions affected by a change, by province and territory	624

Introduction

The Standard Geographical Classification (SGC) is a classification of geographical areas used to collect and disseminate statistics.

Following a description of the SGC itself, other geographical units¹ and related entities used for the collection and dissemination of statistics are presented. An outline of the content of the two volumes that constitute the Standard Geographical Classification is then presented.

The standard geographical classification

The Standard Geographical Classification (SGC) was developed to enable the production of integrated statistics by geographical area. It provides a range of geographical units that are convenient for data collection and compilation, and useful for spatial analysis of economic and social statistics. It is intended primarily for the classification of statistical units, such as establishments or households, whose activities are normally associated with a specific location.

The SGC is based on a classification system originally developed for the dissemination of statistics from the Census of Population.

The SGC conforms to the basic principles of classification. It consists of a set of discrete units that are mutually exclusive and, in total, cover the entire universe. Usually, a classification appears as a hierarchy, each level of which satisfies the above-mentioned principles and is defined by the uniform application of a single criterion. Applied to geography, these principles result in a classification consisting of geographical areas whose boundaries are specifically delimited in accordance with well-defined concepts and which, in total, cover the entire landmass of Canada. The classification appears as a three-level hierarchy of geographical units identified by a seven-digit numerical coding system.

The SGC is one of a family of statistical standards, approved and promulgated by Statistics Canada. These standards provide the basic definitions which, when adopted for data collection and dissemination, result in statistics that

are comparable among series and over time. Even non-standard units, when defined by reference to the standard, are enhanced by better definition of content and relevance to other series.

The geographical units

Two criteria were used in the selection of geographical units for the SGC. The first was that they be easily recognized by the respondents who are asked to report geographical detail. Administrative units were chosen because respondents routinely conduct business with administrative units such as a municipality, county or province.

The second criterion was the usefulness of the geographical units for general statistical purposes. Once again, administrative units are suitable because they are significant users of statistics in establishing and implementing programs involving the expenditure of public funds and also because the general public can readily associate statistics on this basis with the names and boundaries of administrative units.

The SGC identifies three types of geographical unit:

1. province or territory,
2. census division,
3. census subdivision.

In SGC 2006, there are 13 provinces and territories, 288 census divisions and 5,418 census subdivisions.

(1) Province or territory (PR)

Reflecting the primary political subdivision of Canada, provinces and territories are the most permanent level of the SGC. From a statistical point of view, province and territory are basic areas for which data are tabulated. Canada is divided into ten provinces and three territories.

The provinces, territories, and their codes and abbreviations are presented in Table A.

1. In addition to the geographical units of the SGC (e.g., province/territory, census division and census subdivision) Statistics Canada's Policy on Standards recognizes census metropolitan areas, census agglomerations, economic regions, health regions and countries as standard areas.

Table A List of provinces and territories with codes and abbreviations, 2006

Province or Territory	SGC Code	Alpha Code ¹	Abbreviation ¹
Newfoundland and Labrador	10	NL	N.L.
Prince Edward Island	11	PE	P.E.I.
Nova Scotia	12	NS	N.S.
New Brunswick	13	NB	N.B.
Quebec	24	QC	Que.
Ontario	35	ON	Ont.
Manitoba	46	MB	Man.
Saskatchewan	47	SK	Sask.
Alberta	48	AB	Alta.
British Columbia	59	BC	B.C.
Yukon Territory	60	YT	Y.T.
Northwest Territories	61	NT	N.W.T.
Nunavut	62	NU	Nvt.

1. On October 21, 2002, the alpha code for the province of Newfoundland and Labrador changed from NF to NL. In addition, the English abbreviation for Newfoundland and Labrador, which was provisional in the SGC 2001 changed from Nfld.Lab. to N.L..

(2) Census division (CD)

Census division is a general term for provincially legislated areas (e.g., county, “municipalité régionale de comté” and regional district) or their equivalents. Census divisions are intermediate geographical areas between the province and territory level and the municipality (i.e., census subdivision). Usually they are created for the purposes of regional planning and managing common services (e.g., police or ambulance services).

In Newfoundland and Labrador, Manitoba, Saskatchewan, Alberta, Yukon Territory, Northwest Territories and Nunavut, provincial/territorial law does not provide for such administrative geographical areas. Therefore, Statistics Canada, in co-operation with these provinces and territories, has created equivalent areas called census divisions for the purpose of collecting and disseminating statistical data. In the Yukon Territory, the census division is equivalent to the entire territory.

In New Brunswick, six municipalities (i.e., census subdivisions) straddle the legal county boundaries. In order to maintain the integrity of component municipalities, Statistics Canada modified the census division boundaries. Specifically, the following six municipalities straddle county boundaries. The first county in brackets indicates the CD in which these municipalities are completely located:

- Belledune (Restigouche/Gloucester)
- Fredericton (York/Sunbury)
- Grand Falls (Victoria/Madawaska)
- Meductic (York/Carleton)
- Minto (Queens/Sunbury)
- Rogersville (Northumberland/Kent)

Census division boundaries tend to be relatively stable over many years. For this reason the census division has been found useful for analysing historical data on small areas.

Census divisions (CDs) are classified into 13 types. Eleven of these types were created according to official designations adopted by provincial or territorial authorities. The other two types – the “census division” (CDR) and the “territory” (TER) – were created as equivalents by Statistics Canada, in co-operation with the affected provinces and the territory, for the purpose of collecting and disseminating statistical data.

Changes to CD types for 2006 include:

1. CD types added
 - county / comté (CT) in New Brunswick;
 - management board (MB) in Ontario;
 - “territoire équivalent” (TE) in Quebec.

2. CD type deleted
 - “communauté urbaine” (CU) in Quebec.
3. Other change
 - the abbreviation for the CD type - census division - was changed from DIV to CDR.

Table B shows CD types, their abbreviated forms, and their distribution by province and territory.

The total number of CDs has not changed from the previous census, however in Newfoundland and Labrador, Statistics Canada created a new CD in co-operation with the Province of Newfoundland and Labrador and the Nunatsiavut Government to represent the Labrador Inuit Settlement Area. The lands covered by this new CD, Division No. 11 (CD 10 11), were settled under the Labrador Inuit Land Claims Agreement Act, which was passed and received Royal Assent in December 2004. The creation of Division No. 11 increases the number of CDs in Newfoundland and Labrador to 11.

In Quebec, as a result of municipal restructuring (census subdivisions), a new census division type called “territoire équivalent (TÉ)” was created. This new CD type replaces the CD type “communauté urbaine (CU)”, of which there were 3 in 2001. And the “municipalité régionale de comté” (MRC) Desjardins (CD 24 24) has been dissolved. The deletion of the MRC Desjardins decreases the number of CDs in Quebec to 98.

All CD names have had any reference to the associated CD type removed from their names in order to remain consistent with the conventions used for naming all geographical units. For example, Niagara Regional Municipality, RM (CD 35 26) is now referred to as Niagara, RM and Perth County, CTY (CD 35 31) is now referred to as Perth, CTY.

(3) Census subdivision (CSD)

Census subdivision is a general term for municipalities as determined by provincial or territorial legislation, or areas treated as municipal equivalents for statistical purposes (e.g., Indian reserves, Indian settlements and unorganized territories). Municipalities are units of local government.

Beginning with the 1981 Census, each Indian reserve and Indian settlement recognized by the Census is treated as a separate CSD and reported separately. Prior to the 1981 Census, all Indian reserves in a census division were grouped together and reported as one census subdivision.

For 2006, there is a total of 1,095 Indian reserves and 28 Indian settlements classified as CSDs. These are populated (or potentially populated) Indian reserves, which represent a subset of the approximately 3,100 Indian reserves across Canada. Statistics Canada works closely with Indian and Northern Affairs Canada to identify the reserves and the settlements to be included as CSDs. Furthermore, the inclusion of an Indian settlement is dependent upon the agreement of the provincial or territorial authorities.

There are two municipalities in Canada that straddle provincial boundaries, Flin Flon (Manitoba and Saskatchewan) and Lloydminster (Saskatchewan and Alberta). Each of their provincial parts is treated as a separate CSD. Three Indian reserves also straddle provincial limits, Shoal Lake (Part) 39A and Shoal Lake (Part) 40 (Ontario and Manitoba); and Makao (Part) 120 (Saskatchewan and Alberta); and are treated as separate CSDs.

Census subdivisions are classified into 55 types. Fifty-three of these were created according to official designations adopted by provincial, territorial or federal authorities.

Table B Distribution of census division types by province and territory, 2006

Census division type		Canada	N.L.	P.E.I.	N.S.	N.B.	Que.	Ont.	Man.	Sask.	Alta.	B.C.	Y.T.	N.W.T.	Nvt.
Census division / Division															
de recensement	CDR	85	11	5	9	23	18	19
County / Comté	CT	15	15
County	CTY	40	...	3	18	19
District	DIS	10	10
District municipality	DM	1	1
Management board	MB	1	1
Municipalité régionale de comté	MRC	81	81
Regional district	RD	27	27
Region	REG	6	1	...	2	3
Regional municipality	RM	6	6
Territoire équivalent	TÉ	12	12
Territory / Territoire	TER	1	1
United counties	UC	3	3
Total		288	11	3	18	15	98	49	23	18	19	28	1	2	3

The other two types – “Subdivision of unorganized” in Newfoundland and Labrador, and “Subdivision of county municipality” in Nova Scotia – were created as equivalents to municipalities by Statistics Canada, in co-operation with the two affected provinces, for the purpose of collecting and disseminating statistical data.

It should be noted that some CSDs have the same geographical name but different CSD types. In these cases, the census subdivision type accompanying the census subdivision name is used to distinguish CSDs from each other (i.e., Granby, V [for the “ville” of Granby] and Granby, CT [for the “municipalité de canton” of Granby]).

Changes to CSD types for 2006 include:

1. CSD types added
 - Community government (CG) in Northwest Territories;
 - Crown colonie / Colonie de la couronne (CN) in Saskatchewan;
 - “Terres réservées aux Cris” (TC) in Quebec;
 - “Terres réservées aux Naskapis” (TK) in Quebec;
 - Municipality (MU) in Ontario;
 - Municipality / Municipalité (M) in Ontario;
 - Town / Ville (TV) in New Brunswick and Ontario.
2. CSD type deleted
 - “Terres réservées” (TR) in Quebec was replaced by “Terres réservées aux Cris” (TC) and “Terres réservées aux Naskapis” (TK).
3. Other changes
 - City / Cité (C) is replaced by City / Cité (C), City (CY) and “Cité” (CÉ);
 - “Municipalité” (M) in Quebec becomes “Municipalité” (MÉ);
 - “Paroisse (municipalité de)” (P) in Quebec becomes “Paroisse (municipalité de)” (PE);
 - Parish (PAR) in New Brunswick is replaced by Parish / Paroisse (municipalité de) (P);
 - Indian reserve - Réserve indienne (R) becomes Indian reserve / Réserve indienne (IRI);
 - Rural community (RC) in New Brunswick becomes Rural community / Communauté rurale (RCR);
 - Subdivision of county municipality (SCM) in Nova Scotia becomes Subdivision of county municipality / Subdivision municipalité de comté (SC);
 - Indian settlement – Établissement indien (S-E) becomes Indian settlement / Établissement indien (S-É);
 - Settlement (SET) in Yukon Territory becomes Settlement / Établissement (SÉ);

- Subdivision of unorganized (SUN) in Newfoundland and Labrador becomes Subdivision of unorganized / Subdivision non organisée (SNO);
- Unorganized – Non organisé (UNO) becomes Unorganized / Non organisé (NO).

Table C shows CSD types, their abbreviated forms, and their distribution by province and territory.

The structure of the SGC

Each of the three levels of the classification covers all of Canada. They are hierarchically related: census subdivisions aggregate to census divisions, which in turn aggregate to a province or a territory. The relationship is illustrated in Figure 1.

This structure is implicit in the seven-digit SGC code as shown in the following illustration, which uses the code for the city of Oshawa.

PR	CD	CSD	
35			Ontario
35	18		Durham (Regional municipality)
35	18	013	Oshawa (City)

The SGC coding system

At the outset, numerical codes were adopted for ease of use and clarity. The numbers were universally applicable to all of the data processing machines in use at that time.

The use of numerical codes continues but the number of digits in the code changed from six to seven in 1976, when a three-digit code was adopted for census subdivisions because the number of census subdivisions in one census division exceeded 99.

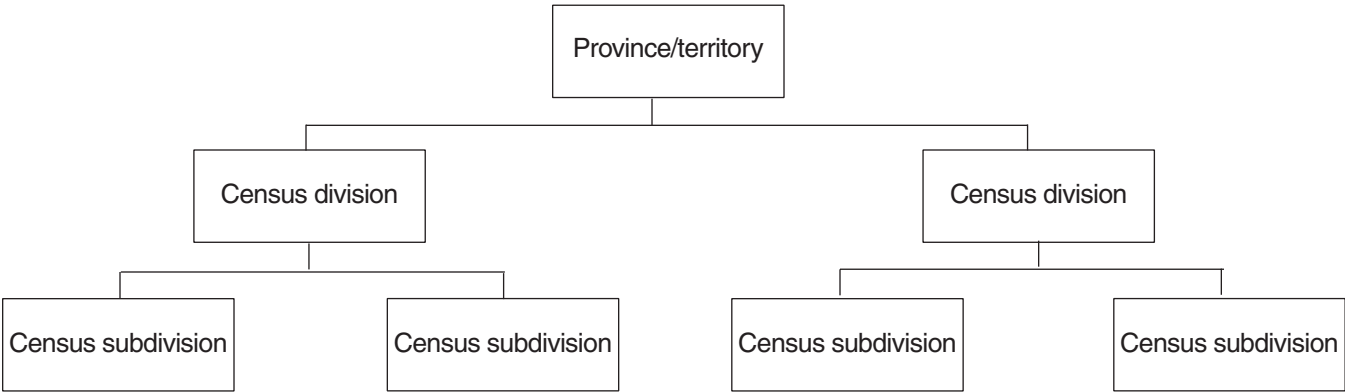

Provinces are numbered from east to west. Because the number of provinces and territories exceeded nine, a two-digit code was adopted. The first digit represents the standard regions of Canada in which the province or territory is located and the second digit denotes one of the ten provinces and three territories. The standard regions are:

1	Atlantic
2	Quebec
3	Ontario
4	Prairies
5	British Columbia
6	Territories

Table C Distribution of census subdivision types by province and territory, 2006

Figure 1 The SGC hierarchy

The provincial and territorial codes are shown in Table A.

The following conventions are used in the coding system:

- a) The codes usually follow a serpentine pattern beginning in the southeast corner of each province, territory or CD. In this way, adjacent code numbers usually represent geographical units that share a common boundary. Exceptions are found in Manitoba and Saskatchewan, where census divisions are numbered in a straight line from east to west, returning to the eastern border when the western border is reached. Also, in Quebec, Saskatchewan, Alberta, and British Columbia, Indian reserve codes are included in the 800 series of numbers, whereas in the other provinces they are accommodated within the serpentine numbering pattern for census subdivisions.
- b) In order to provide the flexibility required to maintain the coding system over the years, the numbering is not sequential (except for CDs, which are more stable). Gaps in the numbering sequence leave opportunities to incorporate new geographical units within the numbering sequence.
- c) Codes are not generally used more than once. However, a code may be reused if at least two editions of the classification have appeared. For example, a code deleted in 1991 may be reused in 2006.
- d) Component parts of codes are preserved as much as possible. For example, when a new CD is created, the original CSD codes are retained where possible.
- e) Official names are used where they are available. The names of incorporated local and regional municipalities are taken from provincial and territorial gazettes, where official notifications of acts of incorporation for new municipalities and changes to existing municipalities are published.
- f) Most official names are accepted as published, but many are edited by Statistics Canada for the sake of consistency and clarity. For example, Statistics Canada drops the CSD type and uses the geographical name only (i.e., the official name City of Ottawa appears in the SGC as Ottawa).
- g) Six municipalities (i.e., census subdivisions) in Canada have different official names in English and French: Beaubassin East / Beaubassin-est, and Grand Falls / Grand-Sault in New Brunswick; and Greater Sudbury / Grand Sudbury, French River / Rivière des Français, The Nation / La Nation, and West Nipissing / Nipissing Ouest in Ontario. For English products, the official name in English is used (i.e., Greater Sudbury), for French products, the official name in French is used (i.e., Grand Sudbury), and for bilingual products, the bilingual name is used with English followed by French (i.e., Greater Sudbury / Grand Sudbury).
- h) The remaining geographical names are created by Statistics Canada in co-operation with provincial, territorial and federal officials (e.g., when creating names for most economic regions).
- i) Some statistical areas (e.g., census metropolitan areas and census agglomerations) straddle provincial boundaries (e.g., the census metropolitan area [CMA] of Ottawa–Gatineau). In such a case, when data are presented for the provincial parts, the name of the province must follow the name of the statistical area. For

Naming geographical units

The following procedure is applied in selecting names for geographical units:

the CMA of Ottawa–Gatineau, each part of the CMA will be identified as Ottawa–Gatineau, Ontario part and Ottawa–Gatineau, Quebec part.

Language form of census division (CD) and census subdivision (CSD) types

Where the CD or CSD type (e.g., town, city, county) is part of the legal name of the CD or CSD as legislated by provincial or territorial governments, Statistics Canada uses the language form of the legal name. In all other cases, where the CD or CSD type is not embedded in the legal name, Statistics Canada uses the language of the publication. As

a consequence, this means that in an English language publication there may be some French language type names, and that in French language publications there may be some English language type names. For example, in the case of Bathurst, New Brunswick, the legislation specifies that the legal name is “City of Bathurst”. Accordingly, the type is presented as City (CY) in English publications; City (CY) in French publications; and as City (CY) in bilingual publications.

Tables D and E provide the standard abbreviations and titles for all CD and CSD types for English, French and bilingual publications respectively.

Maintenance of the SGC

The 2006 SGC presents standard geographical areas as of January 1, 2006. It includes any changes to municipalities, effective on that date or earlier, received by Statistics Canada before March 1, 2006.

Information received after March 1, 2006, has not been included, therefore provincial or territorial authorities may notice some small discrepancies compared to their official records.

Several hundred changes are made to census subdivisions every year. These changes may affect boundaries, codes, names, or types. Changes to the census division level also occur periodically. Most changes originate from provincial legislation (revised statutes and special acts), changes to Indian reserves originate with Indian and Northern Affairs Canada, and other changes come from Statistics Canada.

Legislated changes are effective as of the date proclaimed in the legislation. Other changes are effective January 1, usually of the reference year for the SGC.

The Standard Geographical Classification is published every five years, coincident with the Census of Population. For most statistical applications, holding the geography in a statistical series constant for this length of time is an acceptable compromise between stability and existing reality. Observations at five-year intervals are suitable for historical trend analysis, yet for current series, a tolerable degree of distortion occurs.

An annual summary of changes is available from the Geography Division, upon request. This may be of interest to data collectors wishing to compile data that reflect the actual boundaries of census subdivisions.

The 2006 SGC presents a complete summary of the changes affecting the SGC between January 2, 2001 and January 1, 2006. Volume I of the 2006 SGC contains three appendices for that period, on the changes that impact directly upon the SGC, such as changes in code, name, or type, and indicates how the new and old codes relate to one another. In addition, a fourth appendix provides 2001 Census population counts based on the census subdivision boundaries of each January and July 1st for each census subdivision affected by a boundary change during the period 2001 to 2006.

The other changes such as partial annexations, and boundary and population revisions, which do not affect the SGC codes and usually involve very small areas

and populations, are not shown in the appendices. They are available, however, in the “Interim List of Changes to Municipal Boundaries, Status and Names” published by Geography Division.

Census division changes

In Newfoundland and Labrador, the creation of Division No. 11 occurs in two parts, excluding one small area south of the town of Nain, which remains part of Division No. 10 (CD 10 10). Seven census subdivisions (CSDs) are affected by the creation of Division No. 11. Two of these CSDs, which are of the CSD type subdivision of unorganized (SNO), required splitting and name changes to reflect the new CD structure (See Appendices 1, 2, and 3).

In Quebec, after the dissolution of the “municipalité régionale de comté” (MRC) de Desjardins, the census subdivisions (CSD) of Pintendre, M (24 24 010), Saint-Joseph-de-la-Pointe-de-Lévy, P (24 24 015), and Lévis, V (24 24 020) (now part of CSD Lévis, V [24 25 213]) were annexed to Les Chutes-de-la-Chaudière (now Lévis, TÉ [CD 24 25]) and the CSD of Saint-Henri, M (24 24 005) was annexed to Bellechasse (CD 24 19). Also in Quebec, several census divisions (CDR), “municipalités régionales de comté” (MRC) and “territoires équivalents” (TÉ) were affected by boundary changes:

- The CSD of Saint-Lambert-de-Lauzon, P (24 25 005) was taken from Lévis (24 25) and annexed to La Nouvelle-Beauce (24 26).
- The CSDs of Charette, M (24 36 005), Saint-Élie, P (24 36 010), Saint-Mathieu-du-Parc, M (24 36 015) and Saint-Boniface-de-Shawinigan, VL (24 36 020) were taken from Shawinigan (24 36) and annexed to Maskinongé (24 51).
- The CSD of Saint-Étienne-des-Grès, P (24 37 080) was taken from Francheville (24 37) and annexed to Maskinongé (24 51).
- The CSD of Notre-Dame-du-Mont-Carmel, P (24 36 040) was taken from Shawinigan (24 36) and annexed to Francheville (24 37).
- The CSD of Waterville, V (24 43 005) was taken from Sherbrooke (24 43) and annexed to Coaticook (24 44).
- The CSD of Saint-Bruno-de-Montarville, V (24 57 015) (now part of Longueuil, V [24 58 227]) was taken from La Vallée-du-Richelieu (24 57) and annexed to Longueuil (24 58).
- The CSD of Boucherville, V (24 59 005) was taken from Lajemmerais (24 59) and annexed to Longueuil (24 58).

The names or types of 15 CDs in Quebec have been changed (Table F).

Table F Changes to census division names and types in Quebec

Former CD name and type	Revised CD name and type	SGC code
Les Îles-de-la-Madeleine (MRC)	Les Îles-de-la-Madeleine (TÉ)	24 01
Communauté-Urbaine-de-Québec (CU)	Québec (TÉ)	24 23
Les Chutes-de-la-Chaudière (MRC)	Lévis (TÉ)	24 25
Le Centre-de-la-Mauricie (MRC)	Shawinigan (TÉ)	24 36
Francheville (MRC)	Francheville (CDR)	24 37
La Région-Sherbrookoise (MRC)	Sherbrooke (TÉ)	24 43
Champlain (MRC)	Longueuil (TÉ)	24 58
Laval (MRC)	Laval (TÉ)	24 65
Communauté-Urbaine-de-Montréal (CU)	Montréal (TÉ)	24 66
Mirabel (MRC)	Mirabel (TÉ)	24 74
Communauté-Urbaine-de-l'Outaouais (CU)	Gatineau (TÉ)	24 81
Rouyn-Noranda (MRC)	Rouyn-Noranda (TÉ)	24 86
Vallée-de-l'Or (MRC)	La Vallée-de-l'Or (MRC)	24 89
Le Haut-Saint-Maurice (MRC)	La Tuque (TÉ)	24 90
Le Fjord-du-Saguenay (MRC)	Le Saguenay-et-son-Fjord (CDR)	24 94

In Ontario, Frontenac, CTY becomes Frontenac, MB; Haldimand-Norfolk, RM becomes Haldimand-Norfolk, CDR; and Brant, CTY becomes Brant, CDR.

Census subdivision changes

The changes affecting CSDs have been grouped into eighteen types, each represented by a particular code. They are listed in Table G below with an indication of which types impact upon the SGC code.

Table G Change type codes for census subdivisions

Code	Type of change	Change in SGC code?
1	Incorporation	Yes
2	Change of name	No
2C	Correction of name	No
23	Change of name and type	No
3	Change of type	No
3C	Correction of type	No
4	Dissolution	Yes
5	Annexation of part of	No
5A	Complete annexation and part annexed of	No
6	Part annexed to	No
7	Revision of SGC code	Yes
7C	Correction of SGC code	Yes
8	Part taken from (revision from population challenge)	No
8C	Part taken from (cartographic correction)	No
9	Part lost to (revision from population challenge)	No
9C	Part lost to (cartographic correction)	No
10	Population taken from (revision)	No
11	Population lost to (revision)	No

A legend is provided to explain the appropriate codes (codes 1, 2, 2C, 23, 3, 3C, 4, 5A, 6, and 7) used in the Appendices 1, 2, and 3. A more detailed explanation follows.

New SGC codes (code 1) are assigned to newly created CSDs. Such CSDs are:

1. created out of another census subdivision, typically a municipality created from a populated area located in a rural or unorganized census subdivision; or
2. created when two or more census subdivisions amalgamate.

In the latter case the entries, including SGC codes, for all of the census subdivisions contributing to the newly created census subdivision are deleted (code 4).

Also affecting the SGC code are revisions arising from structural changes, such as the reorganization of CDs. This type of change (codes 7 and 7C) simply indicates a revised code number, with no other change having affected the CSD.

Changes in CSD name (codes 2 and 2C), CSD type (codes 3 and 3C), or CSD name and type (code 23) do not affect the SGC code, but the Classification file is updated.

The most numerous changes are partial annexations (codes 5 and 6), boundary revisions (codes 8, 8C, 9 and 9C) and population revisions (codes 10 and 11), which do not affect the SGC codes, and usually involve very small areas and populations. These changes are not listed in

the appendices, but they can be found in the publication entitled "Interim List of Changes to Municipal Boundaries, Status and Names".

CSDs that have been affected by a change occurring from January 2, 2001 to January 1, 2006 are identified by a flag in Table 3 of this volume. This is done to warn users updating their geographic files or doing trend or longitudinal analysis that the areas being compared could have changed over time. However, by comparing the final population counts from the previous census to the adjusted counts, the user can establish if there was a boundary change, a revision of boundary or a revision of population counts. Information on 2001 Census population counts of CSDs affected by such changes can be found in Appendix 4 of this volume and in the "Interim List of Changes to Municipal Boundaries, Status and Names".

Since January 2, 2001, a total of 2,738 CSD changes have been recorded. These changes affected 1,569 of the 5,600 CSDs that existed in 2001, and resulted in a net reduction of 182 CSDs over the period. Of the total number of changes, 537 affected the CSD code mainly due to municipal restructuring in Quebec (340 dissolutions, 158 incorporations and 39 revisions of code), 89 affected the name, 106 affected the status and 15 affected both the name and status. Boundary changes and revisions (1,918), and population revisions (73) accounted for the remaining 1,991 changes. Since 2001, CSD boundary changes affected 106 census divisions.

Table H presents the number of census subdivision changes by type and by province and territory.

Table H Number of census subdivision changes by type, 2001 to 2006

Province/ Territory	Code 1	Codes 2, 2C	Codes 3, 3C	Code 23	Code 4	Code 7	Codes 5, 5A, 6, 8, 8C, 9, 9C, 10, 11	Total

Other geographical entities

Although the SGC is the basic system of geographical units used for collecting and disseminating statistics in Statistics Canada, it cannot serve all statistical purposes for which the presentation and analysis of economic and social data are required. Therefore, Statistics Canada uses, in addition to the SGC, a number of other standard geographical entities (e.g., census metropolitan areas and census agglomerations, economic regions, health regions, and countries) for the provision of statistics.

Census metropolitan area (CMA) and census agglomeration (CA)

The general concept of these standard units is one of an urban core, and the adjacent urban and rural areas that have a high degree of social and economic integration with that urban core, as measured by commuting flows derived from Census of Population data on place of work.

To form a census metropolitan area (CMA), the urban core must have a population of at least 50,000 and the area (CMA) must have a population of at least 100,000. Once an area becomes a CMA, it is retained as a CMA even if the population of its urban core declines below 50,000, or if its total population falls below 100,000.

To form a census agglomeration (CA), the urban core must have a population of at least 10,000. If the population of the urban core of a CA declines below 10,000, the CA is retired.

As of March 2003, CAs are no longer required to have an urban core population count of 100,000 to be promoted to the status of a CMA. Instead, CAs will assume the status of a CMA if they have attained a total population of at least 100,000 and an urban core of 50,000 or more.

A CMA or CA is delineated using adjacent municipalities (census subdivisions) as building blocks. These census subdivisions (CSDs) are included in the CMA or CA if they meet at least one delineation rule. The three principal rules are:

- (1) Urban core rule: The CSD falls completely or partly inside the urban core.
- (2) Forward commuting flow rule: Given a minimum of 100 commuters, at least 50% of the employed labour force living in the CSD works in the delineation urban core as determined from commuting data based on the place of work question in the last decennial census (2001 Census).

- (3) Reverse commuting flow rule: Given a minimum of 100 commuters, at least 25% of the employed labour force working in the CSD lives in the delineation urban core as determined from commuting data based on the place of work question in the last decennial census (2001 Census).

Another rule concerns the merging of adjacent CMAs and CAs. A CA adjacent to a CMA can be merged with the CMA if the total percentage commuting interchange between the CA and CMA is equal to at least 35% of the employed labour force living in the CA, based on place of work data from the decennial census. The total percentage commuting interchange is the sum of the commuting flow in both directions between CMA and CA as a percentage of the labour force living in the CA (i.e., resident employed labour force).

A CMA or CA represents an area that is economically and socially integrated. However, there are certain limitations to the manner in which this goal can be met. Since the CSDs, which are used as building blocks in CMA and CA delineation, are administrative units, their boundaries are not always the most suitable with respect to CMA and CA delineation. There are always situations where the application of rules creates undesirable outcomes, or where the rules cannot be easily applied. In these circumstances, a manual override is sometimes applied to ensure that the integrity of the program is retained.

CMAs and CAs are statistically comparable because they are delineated in the same way across Canada. They differ from other types of areas, such as trading, marketing, or regional planning areas designated by regional authorities for planning and other purposes, and should be used with caution for non-statistical purposes.

There are 33 CMAs and 111 CAs in 2006. Six CAs from the previous census became CMAs: Moncton in New Brunswick; Barrie, Brantford, Guelph, and Peterborough in Ontario; and Kelowna in British Columbia. Seven new CAs were created: Bay Roberts in Newfoundland and Labrador; Miramichi in New Brunswick; Centre Wellington and Ingersoll in Ontario; Okotoks and Canmore in Alberta; and Salmon Arm in British Columbia. The 2001 CA of Magog merged with the CMA of Sherbrooke since the commuting interchange between the CMA and CA is equal to at least 35% of the employed labour force living in the CA, based on the 2001 place of work data. Finally, two CAs, Gander and Labrador City in Newfoundland and Labrador, were retired because the population of their urban core dropped below 10,000 in 2001.

Between 2001 and 2006, a number of municipalities underwent name changes, amalgamations, annexations, and dissolutions with the result that three CMAs had their names changed: Chicoutimi–Jonquière became Saguenay; Ottawa–Hull became Ottawa–Gatineau; and Greater Sudbury became Greater Sudbury / Grand Sudbury. Two CAs had their names changed: Port Hope and Hope became Port Hope and Haileybury became Temiskaming Shores.

While census metropolitan areas (CMAs) and census agglomerations (CAs) contain approximately 80% of the population of Canada, they cover only 4% of the land area. The census metropolitan area and census agglomeration influenced zone (MIZ) is a concept that geographically differentiates the area of Canada outside CMAs and CAs. Census subdivisions outside CMAs and CAs are assigned to one of four categories according to the degree of influence (strong, moderate, weak or no influence) that the CMAs and CAs collectively have on each of them. Census subdivisions with the same degree of influence, that is based on the percentage of their resident employed labour force that have a place of work in the urban core(s) of CMAs and CAs, tend to be clustered into zones around the CMAs and CAs.

With the introduction of the MIZ concept, it is possible to classify all census subdivisions in the new Statistical Area Classification (SAC) for data dissemination purposes. Indeed, the SAC classifies census subdivisions according to whether they are a component of a census metropolitan area, a census agglomeration, a census metropolitan area and census agglomeration influenced zone (strong MIZ, moderate MIZ, weak MIZ or no MIZ), or the territories (Nunavut, Northwest Territories and Yukon Territory). The application of this classification to census subdivision data could reveal previously hidden details and help users to study the diversity of non-CMA/CA areas of Canada.

Economic region (ER)

This is a standard unit created in response to the requirement for a geographical unit suitable for the presentation and analysis of regional economic activity. Such a unit is small enough to permit regional analysis, yet large enough to include enough respondents that, after data are screened for confidentiality, a broad range of statistics can still be released.

The regions are based upon work by Camu, Weeks and Sametz in the 1950s. At the outset, boundaries of regions were drawn in such a way that similarities of socio-economic features within regions were maximized while those among

regions were minimized. Later, the regions were modified to consist of counties which define the zone of influence of a major urban centre or metropolitan area. Finally, the regions were adjusted to accommodate changes in CD boundaries and to satisfy provincial needs.

An ER is a geographical unit, smaller than a province, except in the case of Prince Edward Island and the Territories. The ER is made up by grouping whole census divisions, except for one case in Ontario, where the city of Burlington, a component of Halton (CD 35 24), is excluded from the ER of Toronto and is included in the Hamilton–Niagara Peninsula ER, which encompasses the entire CMA of Hamilton.

ERs may be economic, administrative or development regions. Within the province of Quebec, economic regions are designated by law (*“les régions administratives”*). In all other provinces, economic regions are created by agreement between Statistics Canada and the provinces concerned.

There were 76 ERs in 2006. Table 6 provides the list of ERs with their component census divisions. The following economic regions were affected by changes at the CD and CSD levels:

In Newfoundland and Labrador, the composition of West Coast–Northern Peninsula–Labrador (ER 10 30) changed due to the creation of the new census division, Division No. 11 (CD 10 11).

In Quebec, the composition of Chaudière–Appalaches (ER 24 25) changed due to the dissolution of the CD of Desjardins (CD 24 24). The component census subdivisions (CSDs) of Pintendre, M (24 24 010), Saint-Joseph-de-la-Pointe-de-Lévy, P (24 24 015), and Lévis, V (24 24 020) were annexed to Les Chutes-de-la-Chaudière (CD 24 25) and the CSD of Saint-Henri, M (24 24 005) was annexed to Bellechasse (CD 24 19).

In Manitoba, the boundary between Southwest (ER 46 30) and Parklands (ER 46 70) was affected because part of Gambler 63, IRI (CSD 46 16 025) was taken from Division No. 16 (CD 46 16) and annexed to Gambler 63 (Part), IRI (CSD 46 15 049) in Division No. 15 (CD 46 15).

In British Columbia, the composition of Lower Mainland–Southwest (ER 59 20) and Thompson–Okanagan (ER 59 30) were affected because part of Boothroyd 8A, IRI (CSD 59 09 803) was taken from Fraser Valley (CD 59 09) and annexed to Boothroyd 8A (Part), IRI (CSD 59 33 897), in Thompson–Nicola (CD 59 33). This did not, however, result in a boundary change.

Health regions

Health region refers to a standard geographical unit defined by the provincial ministries of health. Health regions are legislated administrative areas in all provinces. For complete Canadian coverage, each of the northern territories also represents a health region.

Health regions appear as a hierarchy covering all the country. The classification is Health Regions 2005. There is also one variant of the classification. The variant differs from the main classification in its treatment of health regions in the provinces of Ontario and Nova Scotia. In Ontario, in the main classification, health regions are based on Public Health Units (PHUs). In the variant, Ontario's health regions are based on Local Health Integration Networks (LHINs). In the case of Nova Scotia, district health authorities are legislated administrative areas, while zones are aggregations of the nine district health authorities. Currently, zones are the main classification while District Health Authorities (DHAs) are the variant. For both provinces the main and variant classifications are otherwise identical and both are departmental standards.

Health Regions 2005 replaces Health Regions 2003. From 2003 forward, there will be a two-year revision cycle.

Countries of the world

The standard recommended for names and codes identifying countries of the world is a modified version of "Codes for the representation of names of countries and their subdivisions — Part 1: Country Codes, ISO 3166-1:1997", published by the International Organization for Standardization (ISO) in Geneva, Switzerland, in co-operation with the Statistical Office of the United Nations.

ISO 3166-1:1997 offers two and three character alphabetical coding systems (ISO alpha-2 and ISO alpha-3), and a three-digit numerical coding system (ISO numeric-3).

Presentation

The 2006 Standard Geographical Classification is divided into two separate volumes:

- Volume I The Classification (Catalogue 12-571)
- Volume II Reference Maps (Catalogue 12-572)

Volume I - The classification

Volume I is the basic presentation of the system of geographical units displayed in tables. It describes the SGC

and the census metropolitan areas/census agglomerations (CMAs/CAs), and economic regions (ER), and displays them in a variety of configurations for easy access and understanding. The introductory text explains the background and context for using standard geographical units.

Volume I of SGC 2006 also includes the following tables:

Table 1 Census divisions in numerical order, by province and territory, 2006

This short table gives an overview of the SGC. It covers the first two levels of the SGC hierarchy (i.e., province and census division). The table provides a code, name, and type for each CD.

Table 2 Census divisions in alphabetical order, by province and territory, 2006

This table provides easier access to the classification for people working with census divisions.

Table 3 Census divisions and census subdivisions in numerical order, by province and territory, 2006

This table is the centrepiece of the classification, providing a complete list of the geographical units of the SGC. These units are the building blocks for all other standard geographical areas. The table provides a code, name, type for each CSD, and indicates if the CSD is a component of a CMA/CA.

All CSDs affected by a change in name, type, code, and boundary, or a revision of population counts since 2001 are identified.

Table 3 is supported by an index (Table 7), specific details about the changes (Appendices 1, 2 and 3) and about the revisions of population counts (Appendix 4), and maps (Volume II).

Table 4 Census metropolitan areas and census agglomerations in numerical order, 2006

This is a list of all major urban centres in Canada. They are important in analysing current economic activity since most of the economic activity in Canada occurs in these centres.

The table provides the code, description, and type for each CMA and CA. The CMAs appear in bold type.

The detail of CMAs and CAs by component census subdivisions is found in Table 5.

Table 5 Census metropolitan areas, census agglomerations and their component census subdivisions in alphabetical order, 2006

This table has two functions: it provides easier access to the codes for CMAs and CAs, and it defines CMAs and CAs by reference to CSDs.

The table presents a combined alphabetical list of CMAs and CAs. Under each CMA and CA, the component CSDs are listed alphabetically. For each CMA and CA, the name, type, and code are given and for each CSD, the name, type, and SGC code are given.

Table 6 Economic regions and their component census divisions in numerical order, by province and territory, 2006

This table lists the ERs with their code numbers and defines them by their component CDs, providing the name and code for each component CD. The CDs are listed in numerical order.

For Ontario, users of this table will notice that the component CD Halton (CD code 35 24) appears twice, once under the economic region of Toronto (ER 35 30) and once under Hamilton–Niagara Peninsula (ER 35 50). A note at the end of the table lists the CSDs in CD 35 24 which are part of ER 35 30 and ER 35 50 respectively.

Table 7 Index of place names, by province and territory, 2006

This table gives word access to SGC and CMA/CA codes from any place that has been settled in the past 55 years. This index of place names was built up through survey experience over the years and it included such place names as railway stations, post offices, and names found in provincial gazetteers.

Users of Table 7 will encounter alternative place names and repeated place names among the approximately 46,000 entries in the table. Alternative place names include alternative names from history or other languages and alternative spellings of the same name. In these cases, all names lead to the same SGC code. Repeated place names, however, usually have different SGC codes. About 2,000 names appear more than once within a province, resulting in about 4,325 entries in the table. This usually reflects the fact that a place name has been used for more than one locality, sometimes not a great distance apart. It also happens when a CSD boundary splits a locality and the place name is repeated under each CSD code. This situation creates extra reference work for coders using Table 7.

The table presents all locality names with the names of current census subdivisions alphabetically, by province and territory, with the SGC code and, where appropriate, the CMA/CA code for each place name. The official names and codes for CSDs appear in bold type and the type code for the CSD is also given.

Appendix 1 Changes to census subdivision codes, names and types, between 2001 and 2006, by province and territory, in 2001 code order

This table presents changes showing how an old SGC code relates to a new code and, the former and the revised CSD name or type for a change of CSD name or type. The table provides, in 2001 code order, for each change, the 2001 SGC code, CSD name, CSD type, code of change, and its corresponding 2006 SGC code, CSD name, and CSD type.

Appendix 2 Changes to census subdivision codes, names and types, between 2001 and 2006, by province and territory, in 2006 code order

This table presents the same information as Appendix 1, in 2006 code order. Whereas Appendix 1 shows the municipalities that have disappeared since 2001, Appendix 2 focuses on new incorporations.

The table provides, in 2006 code order, for each change, the 2006 SGC code, CSD name, CSD type, code of change, and its corresponding 2001 SGC code, CSD name, and CSD type. These changes show the current CSD name or type for a change of CSD name or type and how a new code relates to an old code.

Appendix 3 Annual changes to census subdivision codes, names and types, between 2001 and 2006, by province and territory, and by year

This table lists the changes that occur annually in the SGC. Unlike Appendices 1 and 2, Appendix 3 displays all the intermediate changes that would be hidden in the five-year interval.

The table displays on an annual basis the former CSD name, CSD type, and SGC code, code of change (former state), date of change, code of change (revised state) and its revised CSD name, CSD type, and SGC code.

This table is useful for users of historical series of geographical statistics, working on an annual basis. As a matter of fact, the table lists, by year, all of the incorporations and dissolutions of CSDs, revisions of SGC codes, and changes in CSD name and CSD type between January 2, 2001 and January 1, 2006.

Appendix 4 Annual revisions to 2001 census population counts of census subdivisions affected by a change, by province and territory

This table lists the CSDs for which the 2001 Census population counts were revised due to a boundary change or a revision of population counts.

The table provides the CSD name and CSD type, and the population counts based on the CSD boundaries of each January 1st and July 1st during the period 2001 to 2006.

Volume II - Reference Maps

This volume contains a series of 23 provincial and territorial maps depicting the boundaries in effect on January 1, 2006 for census divisions, census subdivisions, census metropolitan areas, and census agglomerations. The boundaries are plotted on base maps, showing water features. The maps identify each CSD by name and code, and CDs and CMAs/CAs by code.

Also included are five maps of Canada, which are:

1. an index to the reference maps;
2. the boundaries for census divisions;
3. the locations of census metropolitan areas and census agglomerations;
4. the spatial distribution of CSDs among CMAs, CAs, CMA- and CA-influenced zones, and territories;
5. the boundaries for economic regions with their component CDs.

Note : In 2006, six Census Agglomerations became Census Metropolitan Areas: Moncton (305), Peterborough (529), Brantford (543), Guelph (550), Barrie (568) and Kelowna (915). In addition, seven CAs were added: Bay Roberts (005), Miramichi (329), Centre Wellington (531), Ingersoll (533), Okotoks (820), Canmore (828) and Salmon Arm (920), and the following CAs were retired: Gander and Labrador City (population of their urban core dropped below 10,000 in 2001) as well as Magog (now grouped with Sherbrooke CMA).

Note: In 2006, six Census Agglomerations became Census Metropolitan Areas: Moncton (305), Peterborough (529), Brantford (543), Guelph (550), Barrie (568) and Kelowna (915). In addition, seven CAs were added: Bay Roberts (005), Miramichi (329), Centre Wellington (531), Ingersoll (533), Okotoks (820), Canmore (828) and Salmon Arm (920), and the following CAs were retired: Gander and Labrador City (population of their urban core dropped below 10,000 in 2001) as well as Magog (now grouped with Sherbrooke CMA).

Information about the contents of Appendices 1, 2, and 3

Appendices 1 and 2 provide the changes to census subdivisions (CSDs) between the 2001 edition of the SGC and the 2006 edition. In addition to the changes of CSD name, CSD type and revision of SGC code, Appendix 1 presents the CSDs that have been deleted (change code 4) and the CSDs that have lost land through the creation of new CSDs (change code 6) whereas Appendix 2 presents the newly created CSDs (change code 1) and the complete annexations of CSDs by another CSD (change code 5A).

In each appendix, there is only one entry or CSD on the left-hand side with one or many entries (CSDs) on the right-hand side. The change code allows users to exactly know what part of the left-hand side entity has changed. Change codes 2 and 2C, 3 and 3C, 23 or 7 respectively indicate a change of CSD name, CSD type, CSD name and type or revision of SGC code. Change codes 1, 4, 5A or 6 respectively indicate a newly created CSD, a CSD deleted, a complete annexation of a CSD by another CSD, or a CSD created out of another CSD.

Contrary to the first two appendices, Appendix 3 uses two change codes to explain the annual changes to CSD codes, names and types between 2001 and 2006. The former state of the census subdivision appears on the left-hand side while its revised state is on the right-hand side. The change codes 2, 2C, 23, 3, 3C and 7 are repeated on both sides while the others are combined to show different changes. For a dissolution (code 4) on the left-hand side, we have a

creation of new CSD (code 1) or a complete annexation of a CSD by another CSD (code 5A) on the right-hand side. A CSD that has lost part of its land through the creation of a new CSD has a code 6 on the left-hand side and a code 1 for the new created CSD on the right-hand side. The symbols (** and ***) attached to SGC codes on the left-hand side are included to inform users that these SGC codes are new entities created after January 1st, 2001 which were updated after their creation.

The change codes used here follow the definitions presented in the introduction. The exceptions are change code 6 that only shows the creation of a new CSD from a part of another CSD and change code Y, introduced here for the first time and only used in Appendices 1 and 2. Code Y shows the remaining part of the CSD from which a part has been lost or the common part of the combination that now makes up the new CSD on account of the complete annexation of a CSD.

Due to late decision to modify the abbreviations and descriptions of many CSD types, there is a difference between the official CSD types listed in the tables of the SGC 2006 and the following four appendices which have been prepared with the information found in the "Interim List of Changes to Municipal Boundaries, Status and Names." Below is a list of official CSD types and those appearing in the appendices.

Census subdivision types

Census subdivision type descriptions found in the appendices	Census subdivision types (official version)	Census subdivision type descriptions (official version)
C	C	City / Cité
	CÉ	Cité
	CY	City
CC	CC	Chartered community
CG	CG	Community government
CM	CM	County (municipality)
COM	COM	Community
CT	CT	Canton (municipalité de)
CU	CU	Cantons unis (municipalité de)
CWC	CN	Crown colony / Colonie de la couronne
DM	DM	District municipality
HAM	HAM	Hamlet
ID	ID	Improvement district
IGD	IGD	Indian government district
IM	IM	Island municipality
LGD	LGD	Local government district
LOT	LOT	Township and royalty
	M	Municipality / Municipalité
M	MÉ	Municipalité
	MU	Municipality
MD	MD	Municipal district
NH	NH	Northern hamlet
NL	NL	Nisga'a land
NV	NV	Northern village
NVL	NVL	Nisga'a village
P	PE	Paroisse (municipalité de)
PAR	P	Parish / Paroisse (municipalité de)
R	IRI	Indian reserve / Réserve indienne
RC	RCR	Rural community / Communauté rurale
RDA	RDA	Regional district electoral area
RG	RG	Region
RGM	RGM	Regional municipality
RM	RM	Rural municipality
RV	RV	Resort village
SA	SA	Special area
SCM	SC	Subdivision of county municipality / Subdivision municipalité de comté
S-E	S-É	Indian settlement / Établissement indien
	SÉ	Settlement / Établissement
SET	SET	Settlement
SM	SM	Specialized municipality
SUN	SNO	Subdivision of unorganized / Subdivision non organisée
SV	SV	Summer village
T	T	Town
	TV	Town / Ville
TC	TC	Terres réservées aux Cris
TI	TI	Terre inuite
TK	TK	Terres réservées aux Naskapis
TL	TL	Teslin land
TP	TP	Township
UNO	NO	Unorganized / Non organisé
V	V	Ville
VC	VC	Village cri
VK	VK	Village naskapi
VL	VL	Village
VN	VN	Village nordique

Note

Change code related to the 2001 census subdivision (CSD):

- 2 change of name.
- 2C correction of name.
- 23 change of name and type.
- 3 change of type.
- 3C correction of type.
- 4 dissolution.
- 6 losing part (a new CSD in 2006).
- 7 revision of SGC code.
- Y common part.

Note

Change code related to the 2006 census subdivision (CSD):

- 1 incorporation.
- 2 change of name.
- 2C correction of name.
- 23 change of name and type.
- 3 change of type.
- 3C correction of type.
- 5A complete annexation of the 2001 entity.
- 7 revision of SGC code.
- Y common part.

Note

Change code (former and revised state):

- 1 incorporation.
- 2 change of name.
- 2C correction of name.
- 23 change of name and type.
- 3 change of type.
- 3C correction of type.
- 4 dissolution.
- 5A complete annexation of the former entity.
- 6 part incorporated from the former entity.
- 7 revision of SGC code.
date: MM/DD.
