CLS_R01 **Statistics Canada has been asked by Dalhousie University, McGill University and McMaster University, three universities leading a Canadian Longitudinal Study on Aging, to seek your permission to provide them with ^YOUR1 contact information, including ^YOUR1 name, address and telephone number, alternate contact and language information.**

As you will read from the consent form, Statistics Canada would also like your permission to disclose the information collected in this survey with these three universities (Dalhousie University, McGill University and McMaster University).

Please read this form completely before deciding if you wish to consent.

All survey information will be kept confidential by the Universities and be used for statistical purposes only.

INTERVIEWER: The respondent may ask if they can read the form over thoroughly and mail it back at a later date. This can be done, but do not prompt the mail-back as an option for the respondent.

Alternate contact information, collected in Exit, includes name, address and telephone number of a relative or friend who could help contact the respondent if the respondent moves or changes their telephone number. If the respondent wishes to provide CLSA with personal contact information but not alternate contact information, they may sign the consent form agreeing to share contact information and, in Exit, refuse to provide details of an alternate contact.
