

Bioproducts Development Survey

Frame

The frame is constructed from five sources:

- 1) All enterprises in the targeted NAICS codes in which at least one respondent from the Emerging Technology Survey 2005 (ETS) declared that they produce or develop bioproducts.
- 2) Enterprises from the BR that were in scope during the 2003 occasion of the bioproduct survey but were non respondent on the Emerging Technology Survey 2005 (ETS).
- 3) Enterprises from the BR that were in scope during the 2003 occasion of the bioproduct survey but were not on the Emerging Technology Survey 2005 (ETS).
- 4) Lists of firms obtained from federal partners, provincial/territorial bioproducts industry associations and industry experts used in the 2003 survey occasion.
- 5) New list of firms (not overlapping the other four sources) obtained from federal partners, provincial/territorial bioproducts industry associations and industry experts.

The Emerging Technology Survey 2005 (ETS) frame was constructed from Canada's Business Register (BR), which contains an Integrated Portion (IP) and a Non-Integrated Portion (NIP). That frame contained certain NAICS from which a subset was used to construct the current frame.

Applying these criteria resulted in a list of 10,300 firms to which around 2% will be in the scope of the survey.
