# A. General Information

Please complete the questionnaire for the business (unit(s) in the pre-printed area above. For this purpose, (a "business" unit" is defined as the lowest level of the firm for which separate records are kept for such details as revenue, expenses and employment.

#### Survey Purpose

The survey purpose is the collection and publication of data necessary for the statistical analysis of the engineering services industry. The information from the survey can be used by businesses and trade associations for market analysis and assessment of industry performance, operating characteristics and trends, by government to develop national and regional economic policies, by other users involved in research or policy making and by Statistics Canada for maintaining important data input to the preparation of the Canadian System of National Accounts.

## **Data-Sharing Agreements**

In order to reduce response burden and to provide consistent Statistics Canada has entered into data sharing agreements with the statistical agencies of Quebec, Manitoba and British Columbia in accordance with Section 11 of the Statistics Act, Revised Statutes of Canada, 1985, Chapter S19. For business locations operated in Quebec, Manitoba and British Columbia, the agreements authorize Statistics Canada to forward a record of the data collected in this survey to the statistical agencies of these provinces. The Statistics Acts of these provinces include the same provisions for confidentiality and penalties for disclosure of information as the federal Statistics Act.

STC/SER-425-60131

#### Confidentiality

The Statistics Act protects the confidentiality of information collected by Statistics Canada.

#### Fax or Other Electronic Transmission Disclosure

Statistics Canada advises you that there could be a risk of disclosure during the facsimile or other electronic transmission. However, upon receipt, Statistics Canada will provide the guaranteed level of protection afforded all information collected under the authority of the Statistics Act.

#### Reporting Instructions

- Report for all operation(s) and/or location(s) pre-printed in the above address area. If it is not possible to report for the above business unit(s), please explain the reason(s) in the comments section at the end of the questionnaire.
- When precise figures are not available, please provide your best estimates.

Please mail the completed questionnaire(s) in the enclosed envelope or fax it to Statistics Canada at 1 888 605-2493 within 30 days of receipt. Lost the return envelope or need help? Call us at 1 800 916-9316 or mail to:

Statistics Canada, Operations and Integration Division, 120 Parkdale Avenue, Ottawa, Ontario K1A 0T6

D. IV	iaiii Dus	iness Activity						
1	Is "Engineering Services", as defined below, the <b>main source of operating revenue</b> for your firm or any of your business units?							
	<b>Engineering Services</b> This industry comprises establishments primarily engaged in applying principles of engineering in the design, development and utilization of machines, materials, instruments, structures, processes and systems. The assignments undertaken by these establishments may involve any of the following activities: the provision of advice, the preparation of feasibility studies, the preparation of preliminary and final plans and designs, the provision of technical services during the construction or installation phase, the inspection and evaluation of engineering projects, and related services.							
	0062	¹ O Yes

# N. Definitions

#### Section D

**Design-Build:** Method of project delivery in which a firm or a team of firms enters into a single contract with an owner to provide both the professional design services and the construction of the project. Different variations of design/build include Build-Own-Operate-Transfer (BOOT), Engineer-Procure-Construct (EPC), and Turnkey projects.

Private Finance Initiative (PFI): Partnership between government and private industry, when a private company takes on the total design and build mandate plus eventual operation of the project on behalf of the government, for a specified concession period. In return they receive regular payment through the project's lifetime, often as many as 30 years.

**Public Private Partnership (PPP or P3):** Partnership between government and private firms, when these firms generally take over full operation of an existing public asset or service in return for a fixed fee.

#### Section E

**Residential building engineering projects:** All engineering services including the provision of design, plans, and studies related to new and existing homes and mixed-used buildings that are predominantly used for residential housing.

Commercial, public and institutional building engineering projects: All engineering services related to new and existing commercial, public, and institutional buildings, including mixed-use buildings that are predominantly used for commercial, public, or institutional purposes.

Petroleum and petrochemical plant and process engineering projects: All engineering services related to petroleum and petrochemical facilities, such as oil and gas platforms, refineries, pipelines, and petrochemical plants; and processes, such as extraction, refining, formulation, and mixing.

Mining and metallurgical plant and process engineering projects: All engineering services related to mining and metallurgical facilities; such as mines, smelters, mills, and mineral refineries; and processes, such as mineral extraction, smelting, refining, and metal forming.

Pulp and paper plant and process engineering projects: All engineering services related to pulp and paper facilities, such as pulp and paper mills; and processes, such as pulp washing, screening, bleaching, and drying.

Microelectronics plant and process engineering projects: All engineering services related to microelectronics facilities and processes for the production of microprocessors, silicon chips and wafers, microcircuits, semi-conductors, etc.

Industrial machinery engineering design projects: All engineering services related to the design of industrial machinery. Examples include agricultural, construction mining, metalworking, commercial and service industry, heating, ventilating and air-conditioning, and power transmission machinery.

Transportation equipment engineering design projects: All engineering services related to the design of transportation equipment. Examples include motor vehicles, aircraft, trains, marine vessels, and space vehicles.

**Electronic and electrical equipment projects:** All engineering services related to the design of electronic equipment, such as computers and peripheral equipment, communications equipment, audio and video equipment, and semi-conductors; and electrical equipment, such as lighting, major and minor appliances, and components thereof.

**Transportation engineering projects:** All engineering services related to highways, roads, streets, bridges, tunnels, railways, subways, airports, runways, harbors, canals, and other transportation infrastructure and ancillary facilities.

**Municipal utility engineering projects:** All engineering services related to municipal utilities. Includes systems for wastewater collection and treatment; stormwater management; irrigation systems and water pipelines; drinking water distribution; garbage collection and disposal systems; natural gas distribution systems; and other municipal utility projects.

**Power engineering projects:** All engineering services related to power generating units (nuclear, hydro-electric, fossil-fuel, etc.), power transmission and distribution lines, and related infrastructure.

Telecommunications and broadcasting engineering projects: All engineering services related to systems for the transmission or distribution of voice, data, and programming. Includes wireless telephony, satellite systems, copper wire, fiber-optic, co-axial cable, landline telephone system, local cable system, television and radio broadcasting.

Hazardous and industrial waste engineering projects: All engineering services related to systems for the collection, treatment, and disposal of hazardous and industrial waste and the control of pollution. Examples include management of nuclear waste, chemical agent destruction, contaminated site remediation, recycling and disposal of industrial wastes

Engineering advisory services: The provision of advice, studies, and reports on engineering matters, except when the advice relates to a specific project. Services classified under this group include policy analysis, regulatory studies, audits, forensic investigations, and expert witness services. Advice, studies and reports performed in conjunction with a specific project are classified based on the project type in product groups E.1.a through E.1.k.

Construction services: Constructing, repairing and renovating buildings and engineering works. Buildings are distinguished by their primary function, such as residential, commercial and industrial. Engineering works include dams; non-building industrial works such as refineries; highways, roads and streets; bridges; sewers; power and communications transmission lines; and similar structures and works. Includes "construction" projects as well as "construction management" services. Also includes "design/build" projects, in which the engineering firm is a prime contractor taking on both the construction and the engineering design risk. However, if design services for a design-build project are provided on a sub-contract basis, they should be included in the relevant project groups in section E.1.

**Project management services:** Planning, supervising, and coordinating the activities involved in carrying out a project. May also include the arranging of financing and procurement of equipment and subcontractors. This category refers only to those situations in which project management is offered as a stand-alone service.

**Research and development services:** Conducting research and experimental development in the physical engineering and life sciences.

**Environmental consulting services:** Identify problems, measure and evaluate risks, and recommend solutions on environmental issues, such as the control of environmental contamination from pollutants, toxic substances and hazardous materials, air and water quality, asbestos contamination, remediation and environmental law.

**Architectural services:** Planning and designing the construction of residential, institutional, leisure, commercial and industrial buildings and other structures by applying knowledge of design, construction procedures, zoning regulations, building codes and building materials.

**Building inspection services:** Evaluate all aspects of the building structure and component systems and prepare a report on the physical condition of the property, generally for buyers or others involved in real estate transactions.

**Surveying and mapping:** Surveying and mapping of areas on the surface of the earth including the sea floor. Activities include cadastral and topographic services; geodesy and Global Positioning System (GPS); geographic information system (GIS); and geospatial mapping. Include "Geophysical surveying and mapping", which involves gathering, interpreting and mapping geophysical data to locate and measure the extent of subsurface resources, and also conduct surveys for engineering purposes.

### Section H

Commercial services: Include a variety of industrial, professional, trade and business services, as well as transactions in royalties and licenses, but exclude goods, freight and shipping transactions, travel, interest, and profit/loss.
