Instructions for Completing the Log

Listed below are the instructions for completing the log. Please read them carefully and if you have any questions, contact us at the toll free number shown on the front cover.

Please complete the trip portion of the log for the first seven (7) days of the reporting period stated on the label on page 2, for the identified vehicle only.

Then continue to complete the fuel portion of the log for the remainder of the period stated on the label or until you have made five (5) fuel purchases. <u>This information can be taken from company records</u>, or you could send us copies of the driver logs.

Please fill in the **Driver Information** section on the fold-out page for all drivers using this vehicle.

Examples

Please refer to the Examples on pages 24 to 31 for help in completing the log.

Trip

A trip is defined as your travel from one location to another for a **specific purpose or use such as** carrying goods, going to or from work, or using the vehicle for personal use. Report a separate trip if there is:

- a change of purpose or use
 - or
- a stop of more than 30 minutes
 - or
- a change in the truck configuration
 - or
- a change in the status of the load from loaded to empty or the reverse
 - or
- a change of driver

Date/time of departure and date/time of arrival

Please indicate the date and time of departure and the date and time of arrival for each trip. This information will enable us to know what times of day the vehicle is on the road.

Examples of how to complete this log are shown on pages 24 to 31.

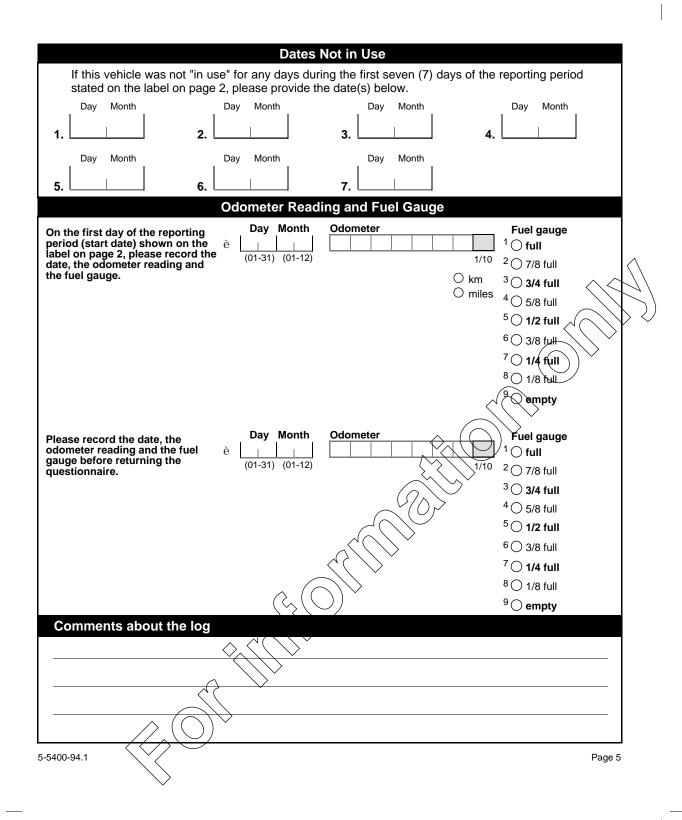

Example 1. A change in the status of the load from empty to loaded - pages 24 and 25.

- Example 2. A change in the trip purpose, a stop of more than 30 minutes and a fuel purchase pages 26 and 27.
- Example 3. A change in the truck configuration pages 28 and 29.

Example 4. A change of driver and two stops over 30 minutes - pages 30 and 31.

5-5400-94.1

Page 4

Note:

Truck Configuration Section

Please enter the following codes in the proper columns (I, II and $\,$ III) of the truck configuration section of the log.

Truck Configuration	Trailer Type	Connection Type
Column I	Column II	Column III
Code	Code	Code
1 - Straight truck	1 - Not applicable	1 - Not applicable
2 - Tractor only	2 - Van	2 - "B" Train
3 - Tractor and 1 trailer	3 - Flatbed	3 - Other
4 - Straight truck and trailer	4 - Tanker	(please specify)
5 - Tractor and 2 trailers	5 - Dump	
6 - Tractor and 3 trailers	6- Other	
7 - Other	(please specify)	

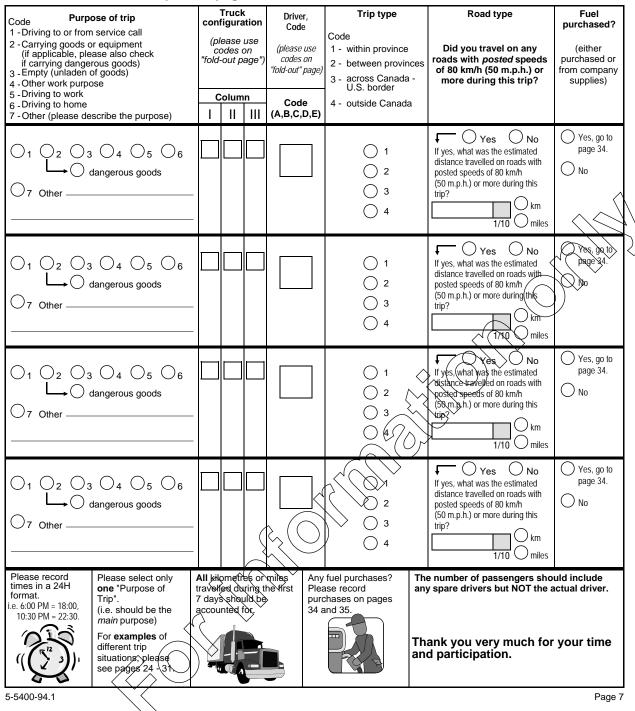

Driver Information

For each driver of this vehicle, please complete the driver information below. Provide each driver's sex and age group. The column for driver's initials is for your use only so that you can easily identify which driver code belongs to which driver. Enter the appropriate driver code (A, B, C, D or E) for each trip in the **Driver** column on the log.

	Example 2. Three trips due to a change in trip purpose and one stop over 30 minutes On February 19, the driver of a straight truck left his home in Ontario at 6:43 to go to the terminal of a local broker. The odometer reading was 105296 miles at the start of his trip. He made a fuel purchase before arriving at the terminal at 7:15. The odometer reading was 105310. At the terminal, he picked up a load and left the terminal at 8:30 to go to Montreal, where he made 3 short stops for deliveries, none of which was more than thirty minutes. He completed his last delivery at 12:20. The odometer reading was 105550.

Detailed Information For Your Interest

Purpose of the survey

It is the goal of this survey to provide annual estimates of vehicle usage and fuel consumption. Transport Canada and Natural Resources Canada sponsor the survey and use the information in conjunction with other data to monitor how vehicle use changes over time and how use affects safety, fuel consumption and the environment. The results are also the prime source of road vehicle use information for researchers and interested members of the public. Prior to this survey, there was no valid, comprehensive source for this information in Canada, even though about ninety percent of all travel in Canada is by road.

Why this vehicle was chosen

Your vehicle was one of those that was selected in your province/territory so that we can find out how you use it over the stated time period. To save money, we are keeping the number of vehicles sampled to a minimum, so it is important that we get your response. Your response is not analysed in any way that identifies you or your vehicle - it is only useful to us when combined with all the other responses. We get a representative picture by selecting vehicles at random from the official vehicle registration files, in order to cover the entire country and all types of vehicles, and we cover the whole year by selecting new ones every week. Once the completed forms are returned, we combine them to build a profile of the average kilometres for a vehicle during the year, then multiply the average by the total number of registered vehicles in the country to obtain total vehicle-kilometres in the year.

The profile created from the sample includes average kilometres per vehicle for each day of the week, and each hour within the day, by sex and age group of drivers, by trip purpose, and by highways and other roads. Each of these characteristics is then multiplied by the total number of vehicles to obtain the total vehicle-kilometres during the year in each group.

How we use each question

The odometer readings are the most important of all, allowing us to know the kilometres travelled for each trip and the total travelled by the vehicle during the survey days. These are essential to calculate the amount of travel in the country each year.

Date and time of departure and arrival tell us when trips start and finish, so we can show, for example, how much travel is on weekdays compared to weekends, in the morning and evening rush-hours compared to the middle of the day, or in the middle of the night. These questions also give us the trip duration in hours and minutes, which helps us determine how much of total travel is made up of very short local trips and how much of long intercity trips.

Number of passengers carried, including any spare drivers but excluding the current driver, at the beginning and end of each trip lets us calculate vehicle occupancy. By multiplying the number of passengers carried by vehicle-kilometres we produce passengers-kilometres.

Detailed Information For Your Interest

Purpose of trip helps to distinguish between broad categories of types of trips as trucks can be used for different purposes; for example, how many trucks are being used by small businessmen or farmers carrying equipment for their own operations, how many by larger businesses distributing their own goods or carrying them between plants, and how many by for-hire or contract carriers carrying for others. To estimate those, we also need to know how many are running empty, and how many are used for personal purposes (meaning not in the course of business).

The Driver Information is asked to provide driver's age group and sex, particularly for computation of accident rates by each group. The age categories listed are those normally used by safety agencies in compiling accident reports, so the estimates of kilometres travelled by age group can be combined with records of accident involvement to give accidents per vehicle-kilometre.

Truck configuration is asked because this questionnaire is being used for registered trucks or truck tractors with a gross weight of 4,500 kg (10,000 lbs) or more. These very large vehicles might be used with different numbers and types of trailers. We are interested in knowing when, where and for which purposes different configurations are used, and in monitoring changes in configurations over time (e.g. shifts to doubles from tractor-semis). The question asks for the configuration to be described in details, including the types of any trailers and connections used for them.

Type of road attempts to distinguish between travel on urban streets, and that on highways or in (ural conditions. We are attempting to do this by asking you how much of each trip is on roads with posted speed limits of 80 km/h or more, which we will use as an approximation of highway or rural conditions. This is an important distinction since safety, fuel consumption and emissions differ greatly between urban streets, and highways or rural conditions. But it is a difficult distinction to make, because people often don't know whether they are in an urban or a rural area, or whether the road they are on is classified as a street or a highway. The clearest difference that most people are aware of is the speed limit. Of course, we realise many drivers will not know exactly how many kilometres they drive on roads with posted speed limits of 80 km/h or more during a trip, so we expect only the best approximate answer the driver is able to provide.

Fuel purchases will be used to calculate fuel consumption in order to monitor trends in fuel use. The best way to calculate the fuel consumption is to have the odometer reading and amount of fuel purchased for **2 fill-ups** (gas tank is full after the fuel purchase). So, if possible, please provide information for at least **2 fill-ups** on the following pages. Without 2 fill-ups, it is possible to estimate fuel consumption by knowing the odometer reading and quantity of fuel purchased on several occasions, which is why we ask for all purchases you make in 4 weeks up to a maximum of 5 purchases.

Federal Agreement

To avoid duplication in surveys and to provide consistent statistics, Statistics Canada has entered into an agreement under section 12 of the Statistics Act with Transport Canada and Natural Resources Canada for the sharing of information from this survey. Under section 12 of the Statistics Act, you may refuse to share your information with Transport Canada and Natural Resources Canada by writing to the Chief Statistician and returning your letter of objection along with the completed guestionnaire.

While participation in this survey is voluntary,
